Semester 1

CULTURAL EDUCATION I   2-0-0-2

Course Objectives

To introduce students to the depths and richness of the Indian culture and knowledge traditions, and to enable them to obtain a synoptic view of the grandiose achievements of India in diverse fields. To equip students with a knowledge of their country and its eternal values.

Course Outcomes

CO	Statement	Level
CO01	Be introduced to the foundational concepts of Indian culture and heritage, the cultural ethos of Amrita Vishwa Vidyapeetham, and Amma's life and vision of holistic education	
CO02	Understand the foundational concepts of Indian civilization like purusharthas, karma-siddhanta, Indian Society and Varna-ashrama-dharma which contributes towards personality growth.	
CO03	Gain a positive appreciation of symbols of Indian culture, itihasas, festivals, traditions and the spirit of living in harmony with nature.	
CO04	Imbibe the principles and practices of Yoga.	
CO05	Get guidelines for healthy and happy living from the great spiritual masters.	

Syllabus

Unit-1

Introduction to Indian culture; Understanding the cultural ethos of Amrita Vishwa Vidyapeetham; Amma's life and vision of holistic education.

Unit-2

Goals of Life – Purusharthas; Introduction to Varnasrama Dharma; Law of Karma; Practices for Happiness.

Unit-3

Symbols of Indian Culture; Festivals of India; Living in Harmony with Nature; Relevance of Epics in Modern Era; Lessons from Ramayana; Life and Work of Great Seers of India.

Text Book

Cultural Education Resource Material Semester-1
Reference Book(s)

The Eternal Truth (A compilation of Amma's teachings on Indian Culture)
Eternal Values for a Changing Society. Swami Ranganathananda. Bharatiya Vidya Bhavan.
Awaken Children (Dialogues with Mata Amritanandamayi) Volumes 1 to 9
My India, India Eternal. Swami Vivekananda. Ramakrishna Mission.

CO-PO Mapping:

<div align="center">COMMUNICATIVE ENGLISH   2-0-1-3</div>

<div align="center">

ENVIRONMENTAL SCIENCE AND SUSTAINABILITY 3-0- 0- 3

</div>

Course Outcomes
CO1. Recognize the physical, chemical & biological components of the Earth's systems and how they function
CO2. Develop an attitude of preserving and conserving bio-diversity
CO3. Understand how local, regional, state, national and international laws and regulations influence environmental decisions
CO4. Realize the benefits of eco-friendly products and green initiatives

Unit 1
State of Environment and Unsustainability, Need for Sustainable Development, Traditional conservation systems in India, People in Environment, Need for an attitudinal change and ethics, Need for Environmental Education, Overview of International Treaties and Conventions, Overview of Legal and Regulatory Frameworks.
Environment: Abiotic and biotic factors, Segments of the Environment, Biogeochemical Cycles, Ecosystems (associations, community adaptations, ecological succession, Food webs, Food chain, ecological pyramids), Types of Ecosystems – Terrestrial ecosystems, Ecosystem Services, Economic value of ecosystem services, Threats to ecosystems and conservation strategies.
Biodiversity: Species, Genetic & Ecosystem Diversity, Origin of life and significance of biodiversity, Value of Biodiversity, Biodiversity at Global, National and Local Levels, India as a Mega-Diversity Nation (Hotspots) & Protected Area Network, Community Biodiversity Registers. Threats to Biodiversity, Red Data book, Rare, Endangered and Endemic Species of India. Conservation of Biodiversity. People's action. Impacts, causes, effects, control measures, international, legal and regulatory frameworks of: Climate Change, Ozone depletion, Air pollution, Water pollution, Noise pollution, Soil/ land degradation/ pollution

Unit 2
Linear vs. cyclical resource management systems, need for systems thinking and design of cyclical systems, circular economy, industrial ecology, green technology. Specifically apply these concepts to: Water Resources, Energy Resources, Food Resources, Land & Forests, Waste management.
Discuss the interrelation of environmental issues with social issues such as: Population, Illiteracy,

Poverty, Gender equality, Class discrimination, Social impacts of development on the poor and tribal communities, Conservation movements: people's movements and activism, Indigenous knowledge systems and traditions of conservation.

Unit 3

Common goods and public goods, natural capital/ tragedy of commons, Cost benefit analysis of development projects, Environment Impact Assessment (EIA), Environment Management Plan (EMP), Green business, Eco-labeling, Problems and solutions with case studies.

Global and national state of housing and shelter, Urbanization, Effects of unplanned development case studies, Impacts of the building and road construction industry on the environment, Eco- homes/ Green buildings, Sustainable communities, Sustainable Cities.

Ethical issues related to resource consumption, Intergenerational ethics, Need for investigation and resolution of the root cause of unsustainability, Traditional value systems of India, Significance of holistic value-based education for true sustainability.

CO-PO Mapping:

COMPUTER ESSENTIALS   3-0-1-4

course objectives:

1. To provide understanding of the various components and functional units of computers, their design and working.
2. To provide insight to digital systems and logic circuit design.

Course Outcomes

CO1: Understand the basic components of computer systems and its functionality.
CO2: Understanding of number systems and representations
CO3: Understanding of Boolean algebra, design and implementation of various logic circuits
CO4: Understanding of various types of combinational and sequential circuits and their functions

Syllabus

Computer Fundamentals: Brief history of Computer, Classification of Computers, Functions & Components of a Computer, Central Processing Unit, Storage units, Bus, Input and output Devices. Types of memory, RAM, ROM, Variants of ROM, Secondary storage devices- hard disk-disk components and geometry. Other Secondary Storage devices: CD/DVD Family, Blue ray Disc, Flash Drive, Memory stick, smart cards. Computer Languages-Machine, Assembly Language and Higher Level languages. Operating systems, Bootstrapping. Program execution with illustrative examples.

Number systems: Decimal, Binary, Octal, Hexadecimal conversion from one to another- Binary arithmetic, representation of signed numbers, 1's and 2's Complement Arithmetic,

Logic Gates and Boolean Algebra. Logic Gates - Basic logic gates- AND, OR, NOT, NAND, NOR, Exclusive OR, Exclusive NOR gates- Logic symbols, truth table and timing diagrams. **Boolean Algebra** - Basic laws and theorems, Boolean functions, truth table, minimization of boolean function using K map method, Realization using logic gates and universal gates.

Logic Circuits: Combinational logic circuits - Half adder, Full Adder, Parallel binary adder, Subtracter, Decoders, Encoders, Multiplexers, De-multiplexers. **Sequential logic circuits** - Flip Flops – RS, JK, T and D Flip Flops, Edge triggered Flip Flops, Master slave Flip Flops.

Registers and Counters: Serial in serial out, Serial in Parallel out, Parallel in serial out, Parallel in Parallel out registers, Bidirectional shift registers. Introduction to counters and applications.

Lab: PC assembling, identification of components, bus subsystems, main chipsets on the motherboard (northbridge, southbridge), Disk formatting, Understanding disk partitions and obtaining partition information using system tools. Operating system installation, Using package manager or system tools to install/update software. Obtaining essential system resource utilization and information using system tools, Troubleshooting.

Basic Linux commands, Searching the file system using find and grep with simple regular expressions. Basic process control using signals: pausing and resuming process from a Linux terminal, terminating a process. Adding/removing from search path using PATH variable. Compressing/uncompressing using tar/gzip and zip tools. Using man pages to understand tool documentation

PROBLEM SOLVING AND ALGORITHMIC THINKING 3-0-0-3

Course Objectives

This course introduces you the fundamentals of problem solving. Computers are programmable machines that allows a programmer to add this exceptional feature to add newer capabilities to them. We use Python as a vehicle towards problem solving.

Course Outcomes

CO1: Apply algorithmic thinking to understand, define and solve problems

CO2: Design and implement algorithm(s) for a given problem

CO3: Apply the basic programming constructs for problem-solving

CO4: Understand an algorithm by tracing its computational states, identifying bugs and correcting them

Syllabus
Unit I
Problem-Solving - understand problem definition, constraints on input/output, sample input and expected output; Algorithmic thinking - reading input/writing output, data representation, choice of data types, formulating solutions to basic problems by applying sequence, selection, and repetition constructs; Modularity – decomposing into functions.
Unit II
Representing and manipulating composite data - lists and strings, problem-solving on lists-performing a search, aggregation, range and ordering operations on lists; Manipulating string data - concatenation, splitting, reversal, comparison, pattern matching on strings, problem-solving on strings.
Unit III
Using recursion for problem-solving, practical examples of recursion, iteration vs. recursion, simple and binary recursion; sorting and searching; Data structures - tuples, sets, dictionaries; Evaluating algorithms, error handling, writing test cases, the importance of documentation/ comments.
Unit IV
Libraries - Create, export and import packages, commonly used packages - math, random numbers, regular expressions, file handling; Programming semantics - Overflow, underflow, mutability, scope, visibility, exception handling, bitwise operators; Basics of algorithms - time and space complexity, asymptotic notations.

Semester 2

CULTURAL EDUCATION-II   2-0-0-2

Course Objectives

To deepen students' understanding and further their knowledge about the different aspects of Indian culture and heritage. To instil into students a dynamic awareness and understanding of their country's achievements and civilizing influences in various fields and at various epochs. To bring a greater ability to deal with life's challenges by helping students towards a balanced and harmonized personality.

Course Outcomes

CO	Statement	Level
CO01	To get an overview of India's contribution to the world in the field of art, architecture, and science; to understand the foundational concepts of ancient Indian education system; to glean insights from Mahabharata.	
CO02	Learn the important concepts of Vedas, Vedangas, and Yogasutras for the refinement of personality.	
CO03	Familiarize themselves with the Bhagavad-Gita and its relevance to daily life; Understand the sagacity of Chanakya; Role of Women in ancient Indian society.	
CO04	To understand the principles of Yoga and its applicability through practice.	

CO05	Gain a deep understanding of the underlying principles of diverse traditions of worship	

Syllabus

Unit-1

To the World from India; Education System in India; Insights from Mahabharata; Human Personality. India's Scientific System for Personality Refinement.

Unit-2

The Vedas: An Overview; One God, Many Forms; Bhagavad Gita – The Handbook for Human Life; Examples of Karma Yoga in Modern India.

Unit-3

Chanakya's Guidelines for Successful Life; Role of Women; Conservations with Amma.

PROFESSIONAL COMMUNICATION 1-0-1-2

DATABASE MANAGEMENT SYSTEM   3-1- 0- 4

Objectives:
    The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a DBMS.

Course Outcomes

  CO1: Have a broad understanding of database concepts and database management system software including a high-level understanding of major DBMS components and their functions

  CO2: Able to model an application's data requirements using conceptual modeling tools like ER diagrams and design database schemas based on the conceptual model so as to successfully design a complete application

CO3: Understand Data Normalization and its usage in database design so as to successfully design a complete application

CO4: Learn transaction properties and types in a DBMS including concurrency control and recovery.

CO5: Able to write SQL statements to create tables and indexes, set constraints, insert/update/delete data, and query data in a relational DBMS thereby building a successful application.

UNIT-1

Introduction - Data Independence - The Three Levels Of Architecture - The External Level - Conceptual Level - Internal Level - Client/Server Architecture- System Structure , Instance and schema, Data Models, Types of DBMS

UNIT 2

Keys - CODD's Rules, Design Issues -ER – Model –Attribute types- Weak Entity Sets - Extended ER Features –ER to Relational Mapping, Structure Of Relational Databases

UNIT 3

Normalization –Anomalies- Functional Dependency: Armstrong's axioms- closure of a relation and closure of attribute– Lossless decomposition-1NF, 2NF, 3NF, Boyce - Codd Normal Form

UNIT 4

The Relational Algebra -- Query Processing and Optimization: Evaluation of Relational algebra expressions-Query Equivalence-Transaction Processing: ACID properties, states of a transaction- Introduction to concurrency control-Deadlock-Recovery.

UNIT 5

Built in SQL functions- Set operations, Sub Queries-Joins-DCL – TCL- Views – Sequences – Index – Locks

PL/SQL Basics – Exceptions – Cursors - Stored Functions – Triggers

TEXTBOOKS:

PROGRAMMING IN C   3-1- 0- 4

Course Objectives

This course is designed to provide basic concepts of the C-programming and use of language constructs for problem solving using C language. This course also covers the usage of pointers, structures and functions for developing applications in C.

Course Outcomes

CO1: Learn fundamental programming concepts needed to develop computer programs.

CO2: Code, debug and execute a well-structured basic computer program using the C language.

CO3: Given a programming problem, design a solution and identify the C programming constructs needed for the solution and implement it in C language.

CO4: Understand and explain different constructs like arrays, pointers and structures and apply it for solving computational problems.

CO5: Develop reusable modules using functions and write programs for file handling.

Unit1
Introduction to C language - structure of 'C' program, Programming elements(tokens) –Classes of data types –Declaration of variables, assigning values to variables, Input and Output operations – printf, scanf, escape sequences (backslash character constants), Specifying Comments, Operators– operator precedence and associativity, Expressions – Evaluation of expressions, type conversions(type casting).

Unit 2
Control Flow - Decision Control and Loop Control
Decision Control Instructions – if-else , nested if-else, Use of logical operators in decision making, Switch control structure
Loop Control Instructions -While, for, do-while, nested loops.

Unit 3
Arrays – single dimensional arrays - declaration –memory representation– initialization and access. 2D arrays and multidimensional arrays.
Strings – defining strings, reading strings from standard input, initializing, accessing, character handling functions, arithmetic operations on characters, character by character input and output, string handling functions, array of strings and its features.
Pointers –Introduction, declaring and initializing pointer variables, pointer expressions, pointers and arrays, pointers and strings, array of pointers.

Unit 4
Functions – definition-declaration-prototypes and function call- actual and formal arguments-types of functions- call by value-call by reference-nesting of functions-recursive functions-pointers to functions-storage class specifiers.

Enumerated data types, Pre processor directives – Macros - Defining symbolic constants, File inclusion, Command line arguments.

Unit 5

Structures – definition-declaration-initialization-accessing structures- array of structures, array within structures, structures within structures, self-referential structures, pointers to structures, uses of structures.

Union- definition- union of structures.

Files – Reading and writing files - file handling functions – file opening modes – file operations

COMPUTER ORGANIZATION   3-1-0-4

Course Objectives

To understand the basic structure and organization of computer system , basic functand the operations of functional units

Course Outcomes:

1. To impart basic concepts of computer architecture and organization,

2. To explain key skills of constructing cost-effective computer systems.

3. To familiarize the basic CPU organization.

4. To help students in understanding various memory devices.

5. To facilitate students in learning IO communication

UNIT 1   BASIC STRUCTURE OF COMPUTERS :

Classification of Computers, Structure of a Computer System, Arithmetic Logic Unit, Control Unit, Bus Structure, Functional unit, Basic OPERATIONAL concepts, multiprocessors and multi computers. Data Representation. Fixed Point Representation. **Floating – Point Representation.** Error Detection codes.

UNIT 2

Integer Addition and Subtraction , Fixed and Floating point numbers, Floating point representation., Signed numbers, Binary Arithmetic, 1's and 2's Complements Arithmetic, 2's Complement method for multiplication, Booths Algorithm, **Hardware Implementation**, **IEEE Standards,** Floating Point Arithmetic , The accumulator, Shifts, Carry and Overflow

UNIT 3 REGISTER TRANSFER AND MICRO-OPERATIONS:

Register Transfer Language, Register Transfer, Bus and Memory Transfers, Arithmetic Micro-Operations, Logic Micro-Operations, Shift Micro-Operations, Arithmetic logic shift unit.

MICRO-PROGRAMMED CONTROL: Control Memory, Address Sequencing, Micro-Program example, Design of Control Unit.

UNIT 4: CENTRAL PROCESSING UNIT AND INSTRUCTIONS:

Instruction Characteristics, CPU with Single BUS, Types of Operands, Types of Operations, Addressing Modes, Instruction Formats, Instruction Cycle, Registers, ALU and Control Unit.

UNIT 5: INPUT OUTPUT: I/O interface, Programmed IO, Memory Mapped IO, Interrupt Driven IO, DMA.

MULTIPROCESSORS: Characteristics of multiprocessors, Interconnection structures, Inter Processor Arbitration, Inter processor Communication and Synchronization, Cache Coherence

DATABASE MANAGEMENT SYSTEM LAB 0-0-1-1

Objectives:

he objective of this lab course is to understand the practical applicability of database management system concepts. Working on existing database systems, designing of database, creating relational database, analysis of table design.

Course Outcomes:

C01: Students get practical knowledge on designing and creating relational database systems.

CO2: Write queries in SQL to retrieve any type of information from a database.

CO3: Understand various advanced queries execution such as relational constraints, joins, set operations, aggregate function etc. .

CO4: Use PL/SQL objects (Functions, cursors, triggers etc.) for solving real life database problems.

Built in SQL functions- Set operations, Sub Queries-Joins-DCL – TCL- Views – Sequences – Index – Locks

PL/SQL – Exceptions – Cursors - Stored Functions – Triggers

PROGRAMMING IN C LAB   0 -0 -1-1

Course Objectives
This course aims to give hands-on experience on developing applications using different constructs in C language.

Course Outcomes
CO1: Enhance problem solving skills and use it for solving computational problems.
CO2: Design, implement, test, debug, and document moderately complex programs in C
CO3: Implement C programs using functions, pointers and structures.
CO4: Use files and file operations to build data handling applications in C.

Syllabus

Basic C program and its execution- Installation of a C compiler and familiarisation of its usage, C program to print message on the console, variable declaration and initialisation, reading values from standard input. Usage of format specifiers for printing values.
Operators- Arithmetic, Relational, Ternary, Logical, Bitwise
Control Statements-if, if-else, nested if, if-else if, switch, goto
Looping Control-while, for, do-while
Arrays-one-dimensional- creating, displaying merging, searching, sorting, reversing
Arrays-Two-dimensional- creating, displaying, Operations on 2D arrays
Strings-String functions, manipulation of strings, multi strings
Pointers – Pointer arithmetic, Array of pointers, pointer to array
Functions – passing arguments, returning values, recursive functions, pointers as arguments
Structures-Initializing, members as array, variables as array, passing structures to functions, pointers to structures
Union-Enum types, preprocessors-macros, macro with arguments, nested macro, file inclusion, command line arguments
File Handling

Semester 3

LIFE SKILLS I   1-0-1-2

Course outcomes

	Soft Skills:
CO1	At the end of the course, the students would have developed self-confidence and positive attitude necessary to compete and challenge themselves. They would also be able to analyse and manage their emotions to face real life situations.
CO2	At the end of the course, the students shall learn to examine the context of a Group Discussion topic and develop new perspectives and ideas through brainstorming and arrive at a consensus.
CO3	At the end of the course, the students will have the ability to prepare a suitable resume. They would also have acquired the necessary skills, abilities and knowledge to present themselves confidently. They would be sure-footed in introducing themselves and facing interviews.
CO4	At the end of the course the students will have the ability to analyse every question asked by the interviewer, compose correct responses and respond in the right manner to justify and convince the interviewer of one's right candidature through displaying etiquette, positive attitude and courteous communication.
	Aptitude:
CO5	At the end of the course, the student will have acquired the ability to analyse, understand and classify questions under arithmetic, algebra and logical reasoning and solve them employing the most suitable methods. They will be able to analyse, compare and arrive at conclusions for data analysis questions.
CO6	At the end of the course, students will be able to interpret, critically analyse and solve logical reasoning questions. They will have acquired the skills to manage time while applying methods to solve questions on arithmetic, algebra, logical reasoning, statistics and data analysis and arrive at appropriate conclusions.
	Verbal:
CO7	At the end of the course, the students will have the ability to understand the nuances of English grammar and apply them effectively.
CO8	At the end of the course, the students will have the ability to relate, choose, conclude and determine the usage of right vocabulary.
CO9	At the end of the course, the students will have the ability to decide, conclude, identify and choose the right grammatical construction.

Syllabus :

Soft skills and its importance: Pleasure and pains of transition from an academic environment to work-environment. Need for change. Fears, stress and competition in the professional world. Importance of positive attitude, self-motivation and continuous knowledge upgradation.

Self Confidence: Characteristics of the person perceived, characteristics of the situation, Characteristics of the Perceiver. Attitude, Values, Motivation, Emotion Management, Steps to like yourself, Positive Mental Attitude, Assertiveness.

Presentations: Preparations, Outlining, Hints for efficient practice, Last minute tasks, means of effective presentation, language, Gestures, Posture, Facial expressions, Professional attire.

Vocabulary building: A brief introduction into the methods and practices of learning vocabulary. Learning how to face questions on antonyms, synonyms, spelling error, analogy etc. Faulty comparison, wrong form of words and confused words like understanding the nuances of spelling changes and wrong use of words.

Listening Skills: The importance of listening in communication and how to listen actively.

Prepositions and Articles: A experiential method of learning the uses of articles and prepositions in sentences is provided.

Problem solving; Number System; LCM &HCF; Divisibility Test; Surds and Indices; Logarithms; Ratio, Proportions and Variations; Partnership; Time speed and distance; work time problems;

Data Interpretation: Numerical Data Tables; Line Graphs; Bar Charts and Pie charts; Caselet Forms; Mix Diagrams; Geometrical Diagrams and other forms of Data Representation.

Logical Reasoning: Family Tree; Linear Arrangements; Circular and Complex Arrangement; Conditionalities and Grouping; Sequencing and Scheduling; Selections; Networks; Codes; Cubes; Venn Diagram in Logical Reasoning.

DATA STRUCTURES AND ALGORITHMS   3-1-0-4
Course Objective
This course aims to provide the basic knowledge of different data structures and its usage. It also covers techniques used for analysing algorithms and notations for expressing time complexity.

Course Outcomes

CO1: Implement basic data structures such as Linked lists, Stack and Queue.
CO2: Analyse an algorithm, determine its time complexity and express it in asymptotic notation.
CO3: Implement different searching and sorting algorithms.
CO4: Use different data structures including tree and graph and solve computational problems using it.
CO5: Choose appropriate data structures and algorithms, understand the ADT/libraries, and use it to design algorithms for a specific problem.

Unit 1. Algorithm Analysis
Mathematical preliminaries; Efficiency of algorithms - notion of time and space complexity, Basic Complexity Analysis - Worst case, Average case and Best cases, Asymptotic Analysis- notations, analysing iterative programs – Simple examples; Recurrences, Analysis of Divide and conquer algorithms - Merge sort, Substitution Method, Master method.

Unit 2: Searching and Sorting
Linear Search, Binary Search – Analysis
Bubble Sort, Insertion Sort, Merge sort, Quick Sort - Analysis

Unit 3. Linear Data Structures
Abstract Data Type, List ADT: Singly linked lists, Doubly linked lists, Circular Linked Lists, Stack ADT implementation and applications, Queue ADT: Implementation and Application. Circular Queue, Priority Queue

Unit 4. Non-Linear Data Structures.
Properties of a binary tree, Representation of a binary tree, Operations on a Binary Tree, Binary tree – Insertion, Deletion, Traversal, Types of Binary Trees - Expression tree, Binary search tree, AVL tree, Heap

Unit 5. Graphs
Adjacency matrix, Adjacency list, Breadth First Search, Depth First Search, Minimum Spanning Tree- Prim's and Kruskal's Algorithm, Dijkstra's algorithm

Text Book: Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Second Edition, Pearson Education

OBJECT ORIENTED PROGRAMMING USING JAVA 3-1-0-4

Course Objective
   The main objective of this course is to understand the basic concepts and techniques which form the object-oriented programming paradigm using Java Language.

Course Outcomes (CO)

CO1: Identify classes, objects, members of a class and relationships among them needed for a specific problem.
CO2: Write Java application programs using OOP principles and proper program structuring
CO3: Demonstrate the concepts of polymorphism, inheritance and thread and document a Java Program using Javadoc.
CO4: Use Java AWT and Swing classes to build GUIs and understand how collection interface is implemented.
CO5: Demonstrate the Conceptual model of UML, activity diagram and their modelling techniques.

Syllabus

Unit 1

Introduction to object oriented software design, Comparison of programming methodologies, Object Basics, Java Environment, Classes and Object, Data Members, Access Specifiers, Arrays within a Class, Array of Objects, Constructors, Default Constructors, Destructors, Static Members, Constant Members.

Unit 2

Overview of Streams, Bytes vs. Characters, File Object, Binary Input and Output, Reading and Writing Objects, Method Overriding, Polymorphism, Super, Interfaces and Abstract Classes, Packages, Exception

Unit 3

Introduction to Threads, Creating Threads, Thread States, Runnable Threads, Coordinating Threads, Interrupting Threads, Runnable Interface, Synchronization.

Unit 4

Collection framework, Collection interfaces and classes, AWT, Swing, Event Handling, Javadoc

Unit 5

Object Oriented Design with UML, Class, object diagrams and sequence diagrams. Use case diagrams and activity diagrams

OPERATING SYSTEMS 3-1-0-4

Course Objective:
A successful student will be able to understand the basic components of a computer operating system, and the interactions among the various components. The course will cover an introduction on the policies for scheduling, deadlocks, memory management, synchronization, system calls, and file systems.

Course Outcomes	
CO 1	Analyze the structure of OS and basic architectural components involved in OS design
CO 2	Understand the process concepts and different operations on processes along with mechanisms for Inter Process Communication.
CO 3	To appreciate the role of Process synchronization towards increasing throughput of a system and understand the different mechanisms used for process synchronization and applying these mechanisms for solving some classical synchronization problems.
CO 4	Apply various concepts related with Deadlock to solve problems related with Resources allocation, after checking the system in Safe state or not.
CO 5	Master concepts of memory management including virtual memory
CO 6	Understand the different I/O management techniques used in Operating Systems. Also familiar with the disk structure and different disk scheduling algorithms

UNIT 1
Introduction to Operating Systems: Mainframe systems-Desktop systems-Multiprocessor systems-Distributed systems-Clustered systems-Real-time systems-Handheld systems
Operating System Structures: System components-Operating System services-System calls-System Programs-System Structures-System Design and Implementation-System Generation.
UNIT 2
Process Management: Process Concept-Process Scheduling-Operations on processes-Cooperating processes-Inter Process Communication
CPU Scheduling: Basic concepts-Scheduling criteria-Scheduling Algorithms-First Come Firstserved Scheduling, Shortest job First Scheduling, Round Robin Scheduling, Multilevel Queue Scheduling, Multilevel Feedback Queue Scheduling.
Process synchronisation:Background,critical section problem, semaphores, monitors,producer consumer problem, dining philosophers problem, readers and writers problem.

UNIT 3
Deadlocks: System Model-Deadlock Characterization-Methods for handling Deadlocks-Deadlock Prevention-Deadlock Avoidance-Deadlock detection-Recovery from deadlock.
UNIT 4

Memory Management: Background-Swapping-Contiguous Memory allocation-Paging-Segmentation-Segmentation with Paging. Virtual Memory: Background-Demand paging-Process creation-Page replacement-Allocation of Frames-Thrashing.

UNIT 5

I/O Systems: Overview, I/O Hardware, Mass storage structure- Disk structure, disk scheduling, disk management.

PRINCIPLES OF MANAGEMENT AND ACCOUNTING   3-0-0-3

OBJECTIVES: The objective of this course to enable the students to have a basic knowledge of principles of management and to provide theoretical and practical aspects of various systems of accounting.

Course outcomes

CO1: Observe and evaluate the influence of historical forces on the current practice of management.
CO2: Explain how organizations adapt to an uncertain environment and identify techniques managers use to influence and control the internal environment.
CO3: Practice the process of management's four functions: planning, organizing, leading, and controlling.
CO4:Identify and properly use vocabularies within the field of management to articulate one's own position on a specific management issue and communicate effectively with varied audiences.
CO5: Evaluate leadership styles to anticipate the consequences of each

Unit 1

Management: meaning and definition, importance of management-Tment, administration and management, functional management, functions of management, levels of management

Unit 2

Financial Accounting: Meaning and important terms, accounting concepts, double entry book keeping, types of accounts, journal, ledger, trial balance.

Unit 3

Final Accounts: Preparation of Trading and Profit and Loss Accounts and Balance Sheet, adjustments

relating to outstanding expenses, prepaid expenses, accrued income unearned income, depreciation and bad and doubtful debts.

Unit 4

Financial Statement Analysis, Trend Analysis

Unit 5

Cost Accounting: Meaning and Definition, difference between cost accounting and financial accounting,

elements of cost, Cost sheet, Expenses excluded from cost.

DATA STRUCTURES AND ALGORITHMS LAB   0-0-1-1

Course Objective

This course aims to teach implementation of different linear and non-linear data structures and its usage in development of applications.

Course Outcomes

CO1: Implement different data structures like Stack, Queue, Linked List and their applications.

CO2: Implement different searching and sorting algorithms and select an efficient one for a particular scenario.

CO3: Implement various Non linear Data structures.

Syllabus

Unit -1

Searching – Linear, Binary Search searches

Sorting – Bubble, Insertion, Quick, Merge sort

Unit-2

Stack – Implementation, Applications – Infix to postfix, Evaluation of postfix expression, Check Balance of parenthesised expression etc..

Queues, Linked-Lists – Implementation and applications

Unit-3 Binary Trees -Implementation, Operations.

Unit-4: Graphs – Implementation of graph, BFS, DFS searches

Lab Topics

UML
a. Class Diagram
b. Object Diagram
c.Sequence Diagram
Java

a.Designing classes and demonstrating object oriented concepts
b.Method Overloading and Method Overriding
c.Inheritance
d.Package
e.Multithreading
f.File handling with Java
g.Iterators and Collections- - Case study mode
h.UI Integration of Java concepts with Swing- Case study mode

List of online tools
1. UML Concepts ---ArgoUML
2. Object Oriented concepts - HPoJ Tool

a.Designing classes and demonstrating object oriented concepts --> Supported by HPOJ
b.Method Overloading and Method Overriding --> Supported by HPOJ
c.Inheritance --> Supported by HPOJ
d.Multithreading --> Supported by HPOJ
e.Iterators and Collections --> Supported by HPOJ

Using Eclipse IDE.
a.Package
b.File Handling with java
c.UI Integration of Java concepts with Swing.

Semester 4

AMRITA VALUES PROGRAMME-II   1-0-0-1

LIFE SKILLS II   1-0-1-2

Professional Grooming and Practices: Basics of Corporate culture, Key pillars of Business Etiquette. Basics of Etiquette: Etiquette – Socially acceptable ways of behaviour, Personal hygiene, Professional attire, Cultural Adaptability. Introductions and Greetings: Rules of the handshake, Earning respect, Business manners. Telephone Etiquette: activities during the conversation, Conclude the call, To take a message. Body Language: Components, Undesirable body language, Desirable body language. Adapting to Corporate life: Dealing with people.

Group Discussions: Advantages of Group Discussions, Structured GD – Roles, Negative roles to be avoided, Personality traits to do well in a GD, Initiation techniques, How to perform in a group discussion, Summarization techniques.
Listening Comprehension advanced: Exercise on improving listening skills, Grammar basics: Topics like clauses, punctuation, capitalization, number agreement, pronouns, tenses etc.

Reading Comprehension advanced: A course on how to approach middle level reading comprehension passages.

Problem solving – Money Related problems; Mixtures; Symbol Based problems; Clocks and Calendars; Simple, Linear, Quadratic and Polynomial Equations; Special Equations; Inequalities;

Functions and Graphs; Sequence and Series; Set Theory; Permutations and Combinations;

Probability; Statistics.

Data Sufficiency: Concepts and Problem Solving.

Non-Verbal Reasoning and Simple Engineering Aptitude: Mirror Image; Water Image; Paper Folding; Paper Cutting; Grouping Of Figures; Figure Formation and Analysis; Completion of Incomplete Pattern; Figure Matrix; Miscellaneous.

Special Aptitude: Cloth, Leather, 2D and 3D Objects, Coin, Match Sticks, Stubs, Chalk, Chess Board, Land and geodesic problems etc., Related Problems

COMPUTER NETWORKS   3-1-0-4

Course Objective:

This course presents an in-depth discussion of the most important networking protocols comprising the TCP/IP protocol suite. Students will be able to understand state of the art in network protocols, architectures, and applications.

Course Outcomes

CO1	Understand the concepts of Data Communication.
CO2	Study the functions of OSI Layers.
CO3	Familiarise with the Transmission Media, Flow Control and Error Detection & Correction.

CO4	Understand fundamental concepts in Routing, Addressing & working of Transport Protocols.
CO5	Gain familiarity with common networking & Application Protocols.

Unit 1

Evolution of Computer Networking-Types of Network- networks topologies-Protocols

standards-Network Devices-The OSI reference model- TCP/IP Reference Model.

Physical Layer: transmission media- Analog Transmission- Digital transmission

Unit 2

Data Link Layer Design Issues-Services provided to the Network Layer-Framing-Error

Control-Flow Control- Error Detection and Correction- Elementary Data Link Protocols-

Sliding Window Protocols- Multiple Access Protocols-An overview of IEEE Standard for LANs, MAC Address.

Unit 3

Introduction to Network Layer – Services - Circuit Switching Vs Packet Switching-Packet

Switched Networks-Types of Routing-routing algorithms- congestion control algorithms-

Network Protocols-IP- IPV4, IPV6, Subnets, Gateways- Congestion Avoidance in Network Layer.

Unit 4

The Transport Services – Services provided to the upper layers –Elements of transport

Protocols –Internet Transport Protocols- Congestion Controls in Transport Layer

Unit 5

Principles of Network Applications-Web and HTTP-Electronic mail-DNS

ADVANCED JAVA AND J2EE   3-1-0-4

Course Objectives

Course Outcomes

CO1 Design and develop client-server applications using sockets in Java.

CO2 Develop applications in Java using swings and JDBC.

CO3 Understand the usage of generic classes and collections and write application using the same in Java

CO4 Understand server-side programming and configure a web server to deploy servlets and JSP programs.

CO5 Create a moderately complex application with MVC architecture.

Unit 1
Networking: Classes to be covered Socket, ServerSocket, IPAddress, URL connections – Swing controls – JDBC - Writing JDBC applications using select, insert, delete, update.

Unit 2
SERVLETS: Introduction to Servlets (Life cycle of servlets, Java Servlets Development Kit, creating, Compiling and running servlet). The servlet API: javax. servlet package. Reading the servlet Parameters, Reading Initialization parameter. The javax.servlet.http.

Unit 3
JAVA SERVER PAGES: Configuring Tomcat JSP/Servlet server. Brief Introduction to J2EE Architecture. Advantage of JSP technology. JSP Architecture, JSP Access Model. JSP Syntax Basic (Directions, Declarations, Expression, Scriplets, Comments) JSP Implicit Object (Out, HttpServlet Request, Http Servlet Respose, Exception Handling, Session Management.

Unit 4
Package Handling HTTP Request and Response (GET/ POST Request), Using Cookies, Session Tracking. Exception Handling.

Unit 5
Introduction to EJB – Understanding MVC – Building Controllers, models and views – Integrating hibernate with spring.

TEXTBOOKS:

1. Deitel&Deitel, "Java How to program", Prentice Hall, 4 th Edition, 2000.

2. Gary Cornell and Cay S. Horstmann, "Core Java Vol 1 and Vol 2", Sun Microsystems Press, 1999.

CAM									

WEB TECHNOLOGIES   3-1- 0- 4

 Course Objectives

Course Outcomes

CO1: Understand basics of web technologies.
CO2: Create interactive web applications using latest web technologies
CO3: Publish and maintain interactive web applications
CO4: Use XML standards and tools towards smart web applications

Unit -1
HTML5 and CSS3
HTML5- Basic Tags, Tables,Forms.HTML5 Tags,HTML Graphics, HTML media,
HTML Graphics,HTML APIs.
CSS - Background, Borders,margin, Box model. Styling text, fonts,list,links,tables.
CSS overflow,float,inline blocks, pseudoclasses,pseudoelements.CSS border images,rounded corners
Unit-2
Java Script
Client side scripting using java script, Introduction to java script, internal and external Java script files, variables, control statements, loops, Arrays , string handling , How to write functions in JavaScript, inputting and outputting from form elements to JavaScript. DOM concept, creating html elements using java script. Drawing 2D shapes, handling events. Introduction to AJAX
Unit-3
Building Single page applications with Angular JS
Single page application – introduction , two way data binding, MVC in angular JS, controllers, getting user inputs , loops , Client side routing – accessing URL data , various ways to provide data in angular JS.

Unit -4

Server Side Programming

Server side scripting, Difference between client side and server side scripting languages. Introduction to PHP, variables, control statements, loops, Arrays, string handling, PHP forms, Global variables in PHP, Regular expression and pattern matching, Database programming: inputting and outputting data from MySQL using PHP, insertion , deletion and updating data. State management in web applications, cookies, Application and session state.

Unit-5

Introduction to Xml, usage of XML, XML tags, elements and attributes, attribute type, XML validation: DTD and XSD, XML DOM

Case Study : Web Application Framework- Flask- Flask and SQLite- Bootstrap

SOFTWARE ENGINEERING   3-0-1-4

Objectives: The course provides a professionally guided education in software engineering that helps students to transition into an amateur software engineer by exposing themselves to a broad perspective on software systems engineering, concentrating on widely used techniques for developing large-scale software systems. This course covers a wide spectrum of software processes from initial requirements elicitation through design and development to system evolution.

Course Outcomes:

CO 1: Recognize and apply the principles of software engineering techniques.

CO 2: Understand various software process models

CO 3: Apply the right software design methodology for a given scenario

CO 4: Evaluate a system developed for real-world applications

CO 5: Identify and implement various industry standards in software development and maintenance.

Unit 1

Introduction to Software Engineering: Software Crisis-Changing Nature of Software- Software Myths -Process and Product - A Generic View of Process - Software engineering-A layered technology, a Process framework - Software characteristics- SDLC Introduction – Quality Attributes

Unit 2

Introduction to Software Paradigms - Approaches – Process Models – The Waterfall model, Incremental Process models, Evolutionary Process Models, Specialized Process Models, The Unified Process. – Agile Introduction - - Feasibility Studies - Software Requirements: Functional and non-Functional Requirements, User Requirements, System Requirements, Interface Specification, the Software Requirement Document.

Unit 3

Analysis Modeling - Elements of Analysis Model - System Models: Context Models, Behavioural Models, Data models, Object Models, Structured Method -. Design Engineering: Introduction to Design concepts - Design characteristics - Design Process and Design Quality- Creating an Architectural Design: Software architecture, Data Design - Architectural Styles and Patterns,

Unit 4

Test Engineering - Testing Fundamentals - Objectives - Principles – Testing Strategies: A strategic approach to software testing, Test Strategies for Conventional Software, Black-Box and White-Box testing, Validation testing, System testing, the Art of Debugging - ITG - Software Quality Metrics

Unit 5

Maintenance Engineering – Change Management – Maintenance Side effects - Reverse Engineering and Reengineering

Course Objectives
Course Outcomes

CO1   Design and develop client-server applications using sockets in Java.

CO2   Develop applications in Java using swings and JDBC.

CO3   Implement the usage of generic classes and collections and write application using the same in Java

CO4   Create server-side programming and configure a web server to deploy servlets and JSP programs.

CO5   Develop enterprise applications using Java EE

1.   Program to demonstrate Swing components.
2.   Program to implement Address Book using Swing components.
3.   Program to demonstrate loading of file in an Swing Component.
4.   Multithreading program, one of the threads print a….z and other thread print 1…26.
5.   Example: 1a2b3c…. 26z.
6.   Multithreading program to schedule two jobs.
7.   Client Server Socket Programming.
8.   Server Socket which receives data from a java client program using JSON
9.   Program to fetch a particular Website tags when an URL is specified.
10.   Implement stack, queue, hashmap, hashtable, enumeration, ArrayList.
11.   Create a table from a java program.
12.   Update a table from a java program.
13.   Load a table data in Swing components.
14.   Delete a record from a table, drop table from a java file.
15.   Program which shows use of Statement, Prepared Statement and Callable Statement.
16.   Configure Apache Tomcat and write a hello world jsp page.
17.   Configure Apache Tomcat server to deploy Servlets.
18.   Exceptional handling in a JSP page.
19.   Create a login page and authenticate a user in a JSP page using database.
20.   Write a program to implement a simple servlet which writes a Welcome HTML page in the web browser.
21.   A servlet should receive a parameter from JSP page and process it.
22.   Servlet program to implement parameter handling.
23.   Servlet program to handle GET and POST request.
24.   A website hit counter data which has to be saved in a cookie.
25.   Implement a Java Beans to set and get values.
26.   Program to illustrate the procedure of handling session and print a Hello world using Java Bean.
27.   Enterprise Session Beans, deploy, and run a simple Java EE application which does add, subtract, multiply and division using stateless session bean.

28.	An application named account using stateful session bean. The purpose of account is to perform transaction operations (deposit and withdraw) for the customer.
29.	The account application consists of an enterprise bean, which performs the transactions, and two types of clients: an application client and a web client.

WEB TECHNOLOGIES LAB   0 -0- 1- 1

Course Objectives

Course Outcomes
CO1: Develop basics of web technologies using HTML and CSS
CO2: Create interactive web applications using latest web technologies
CO3: Develop and maintain interactive web applications
CO4: Use XML standards and tools towards smart web applications

1. Create a web page with advanced layouts and positioning with CSS and HTML.
2. Design a website with different methods of embedding CSS in a web page.
3. Create a static web page which displays your personal details. (Hint: CSS3 and HTML5)
4. Create a web page through which the user can enter his / her details to become an authenticated user of that page.
5. Create a web site for a Computer Hardware shop. (Hint: CSS3 and HTML5)
6. Create a web site for Amrita School of Arts and Sciences. (Hint: CSS3 and HTML5)
7. Create a web page that shows different methods of embedding JavaScript.
8. Create a web page with rollover menus. Rollover menus should be created using JavaScript.
9. Create a simple calculator, which can perform the basic arithmetic operations.
10. Validate the registration for with the following criteria:
    1.	Name and Age should be Mandatory Fields.
    2.	Password and Re-enter Password fields should contain same value.
    3.	Name field should accept only character values.
11. Write a PHP program to store current date-time in a COOKIE and display the 'Last visited on' date-time on the web page upon reopening of the same page.

12. Write a PHP program to store page views count in SESSION, to increment the count on each refresh, and to show the count on web page.
13. Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.
14. Create a registration form using Angular JS.
15. Create a simple AngularJS calculator application using Angular Services.
16. Create an application Searching for a character and displaying its position using AngularJS.

17. Create an application using angular JS filters.
18. Create single page web applications using the MVC pattern of *AngularJS.*
19. Design an XML document to store information about a student in an engineering college affiliated to Amrita. The information must include USN, Name, Name of the College, Branch, Year of Joining, and e-mail id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document.
20. Create an XML document with the following sample real estate data
    - Ensure its validity
    - Then try to break it
21. Create an internal DTD for the previous XML document
22. Move the previous DTD to an external file and validate the XML document again
23. Create an application that loads a text string into an XML DOM object, and extracts the info from it with JavaScript.
24. Create an application which reads data from an XML file into XMLDOM object and retrieves the text value of the first element in the xml file.

Semester 5

LIFE SKILLS III   1-0-1-2

Team Work: Value of Team work in organisations, Definition of a Team, Why Team, Elements of leadership, Disadvantages of a team, Stages of Team formation. Group Development Activities:
Orientation, Internal Problem Solving, Growth and Productivity, Evaluation and Control. Effective Team Building: Basics of Team Building, Teamwork Parameters, Roles, Empowerment, Communication, Effective Team working, Team Effectiveness Criteria,

Common characteristics of Effective Teams, Factors affecting Team Effectiveness, Personal characteristics of members, Team Structure, Team Process, Team Outcomes.

Facing an Interview: Foundation in core subject, Industry Orientation/ Knowledge about the company, Professional Personality, Communication Skills, activities before interview, upon entering interview room, during the interview and at the end. Mock interviews.

Advanced Grammar: Topics like parallel construction, dangling modifiers, active and passive voices, etc.

Syllogisms, Critical reasoning: A course on verbal reasoning. Listening Comprehension advanced: An exercise on improving listening skills.

Reading Comprehension advanced: A course on how to approach advanced level of reading, comprehension passages. Exercises on competitive exam questions.

Specific Training: Solving campus recruitment papers, National level and state level competitive examination papers; Speed mathematics; Tackling aptitude problems asked in interview; Techniques to remember (In Mathematics). Lateral Thinking problems. Quick checking of answers techniques; Techniques on elimination of options, Estimating and predicting correct answer; Time management in aptitude tests; Test taking strategies.

DATA WAREHOUSING AND DATA MINING 3 1 0- 4

Course Objectives

This course will introduce the concepts of data warehouse and data mining, which gives a complete description about the principles, usage, architectures, applications, design and implementation of data mining and data warehousing concepts.

Course Outcomes:

CO1 : To understand, describe and visualize the different types of data so as to apply data mining techniques

CO2: To understand the concepts of a data warehouse and its operations

CO3: To apply the frequent pattern mining algorithms for extracting associations from transaction data

CO4: To develop skill in selecting the appropriate classification algorithm for solving practical problems

CO5: To understand the concepts, methods and applications of cluster analysis

Syllabus:

Unit-I

Introduction to Data Mining concepts – Different types of data for mining: database data, transaction data and other kinds of data- Different types of Patterns for mining techniques- Major issues in Data mining- Data objects and attributes types- Statistical description of data- Data visualization technique.

Unit-II

Introduction to Data Warehousing Concepts- Data warehouse basic concepts- Data warehouse Modeling- Data warehouse design and usage- data warehouse Implementation. data generalization by attribute-oriented induction.

Unit-III

Frequent Patterns mining basic concepts- Apriori algorithm- Generating Association Rules from Frequent Itemsets - Improving the Efficiency of Apriori.

Unit-IV

Classification basic concepts and general approaches- Decision tree induction – Bayes classification methods – Rule Based classification

Unit-V

Clustering analysis basic concepts- Overview of clustering – major clustering method – partitioning methods: K-means & k-medoids.

PYTHON PROGRAMMING   **3-0- 0- 3**

Objectives: The main objective of this course is to familiarize the student with Python programming concepts, syntax, semantics, and the runtime environment, as well as with general coding techniques and object-oriented programming.

Course Outcomes

CO1	Students will be able to explain the structure, syntax, and semantics of the Python language.
CO2	Students will be able to solve real-world problems by applying all the Pythonic Data Structures, Objects, Functions and Modules.
CO3	Students will be able to explain how the Object-Oriented Programming concepts work in Python.
CO4	Students will be able to apply the basics of data science using advanced Python libraries.
CO5	Students will be able to build practical applications in Python.

Unit 1
Basic concepts in Python: Python runtime environment, Python variables, Python basic Operators, Understanding python blocks. Python Data Types, Declaring and using Numeric data types and functions. Conditional statements and loop statements in Python.
Unit 2
Python Complex data types: Strings and string functions, List and Tuple manipulation, Dictionary and Set operations.
Unit 3
Functions and modules in Python: defining functions, scope, types of arguments, the anonymous function(lambda), map, filter, reduce and zip functions.
Introduction to Python modules and creating own modules.
Unit 4
Exception handling in Python. Python File Operations: Reading files, Writing files in python. Python directories.
Object oriented programming in Python: Defining classes and instantiating objects. Python Constructors and destructors. Inheritance and polymorphism in Python.

Unit 5

Fundamentals for data science: Introduction to Jupyter notebook, Programming using Numpy, Pandas and matplotlib libraries.

MOBILE APPLICATION DEVELOPMENT   0-1-1 - 2

Course Objectives

Android Application Development course is designed to quickly get you up to speed with writing apps for Android devices. The student will learn the basics of Android platform and get to understand the application lifecycle.

Course outcomes

CO1 Understand the different API levels and working of Dalvik Virtual Machine
CO2 Get an idea about different views, layouts and resource files
CO3 Learn more about UI components - GridView and ListView, Action bar, Adapters, Menus: Option menu, context menu, sub menu, Pickers - Date andTime, Spinners.
CO4 Learn about Android Notifications and Services.
CO5 Provide knowledge for developing SQLite applications

Prerequisite Courses:

Sl. No	Course Code	Course Name
1		Advanced Java and J2EE
2		Web Technology

In this Lab, there will be one hour theory class each lab. After finishing the class, lab will start. Initial stage of the lab, 2 hours will be theory class only. Because students basic things about mobile application should be clear.

Introduction: About Android, Pre-requisites to learn Android, Dalvik Virtual Machine & .apk file extension, Android API levels (versions & version names)

Android Java Basics: Getting started with Android development, project folder structure, simple programming, running project, generating build/APK of the app from Android Studio

First application: Creating Android Project, Android Virtual Device Creation, Set up debugging environment, Workspace set up for development, Launching emulator, debugging on mobile devices.

Basic UI design: Basics about Views, Layouts, Drawable Resources, Input controls, Input Events, Toasts.

More UI Components: Layouts - GridView and ListView, Action bar, Adapters, Menus: Option menu, context menu, sub menu, Pickers - Date and Time, Spinners.

Activity and Fragment: Activity, Fragment, Activity Lifecycle and Fragment Lifecycle.

Intents: Implicit Intents, Explicit intents, communicating data among Activities.

Navigation Drawer: Panel that displays the app's main navigation screens on the left edge of the screen

Android Notifications – Toast, Dialogs (TimePicker, DatePicker, Progress, Alert), Notification Manager and Push Notification

Introducing SQLite - SQLiteOpenHelper and creating a database - Opening and closing a database, Working with cursors Inserts, updates, and deletes

As a term project students should implement a mobile app with the following:

• Understand the app idea and design user interface/wireframes of mobile app

• Set up the mobile app development environment

PYTHON PROGRAMMING LAB   0- 0-1 -1

Objectives: This course provides the basics of programming using Python programming language.

Course Outcomes

CO1	Students will be able to design programs to solve problems using the Python language constructs.

CO2	Students will be able to develop real-time applications using advanced Python libraries.	

Syllabus

Installing Python: basic syntax, interactive shell, editing, saving, and running a script.
Python variables, assignments, expressions, numerical data types and operators, writing comments in the program.
Exercise on Control structures and loops in Python: if-else, for, while.
Lists, tuples, set and dictionaries: basic list operators, replacing, inserting, removing an element; searching and sorting lists; tuple creation and manipulation, creating sets and set operations, dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.
Designing functions with various types of arguments. Exercise on the usage of lambda, map, filter, zip.
Working with text files: Programs for manipulating files and directories, os and sys modules; Reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated).
Developing Python programs to implement inheritance and overloading and overriding.
Introduction to Jupyter notebook and IPython. Developing programs using Numpy, Panda and Matplotlib libraries in Jupyter notebook.

COMPREHENSIVE TECHNICAL VIVA VOCE (2 Credits)

Course Objectives

The objective of comprehensive viva-voce is to assess the overall knowledge of the student in the relevant field of computer science acquired over 3 years of study in the undergraduate program. To assess the student's technical and analytical skills in the domain of computer science and also communication skills.

Course outcomes

CO1:   Prepare comprehensively to answer questions from all the courses of five semesters.

CO2: Attain Oral Presentation skills by answering questions in precise and concise manner

CO3: Gain confidence and interpersonal skills.

Syllabus

The viva may be done based on every course covered till the fifth semester. The objective of this is to enable the students to attend placements and be better performers in their future.

Semester1:   Programming concepts, Syntax, IDE, Logic and programming constructs, Compiler and interpreter problem solving- Logic and algorithms and other topics, C language,COA- Arrays,structure,enum and functions, pointers and other topics

Semester2:   Oops and C++, Object,class,inheritance,polymorphism and abstraction and message passing and other topics, Data structures - Sorting and searching, Tree,list,graph and other topics, OS- Types,Kernel,shell,features.OS core.Linux vs windows, DBMS-DDL,DML and DCL,Normalization,Relationships,Dependancy.

Semester3:   Java, OOPS concepts in java.JDK,JVM,JRE,wrapper classes and other topics, Networking: protocols,layers-model,Devices, Web technologies:HTML,XML,Javascript and other topics

Semester4:   Advanced Java and J2ee- Collections framework,JDBC,Servelets API,JSP and other topics, Software engineering- Software Process, project management, SDLC phases and other topics

Semester5:   C# and .Net- C# fundamentals and core and other topics.Network security/cryptography and cyber security

MINOR PROJECT   4 Credits

Course Objectives

The main objective of the Project is for the students to learn and experience all the major phases and processes involved in solving "real life problems".

Course Outcomes

The major outcome of the BCA project must be well-trained students. More specifically students must have acquired the following skills:

CO1 Students will be able to practice acquired knowledge within the chosen area of technology for project development.

CO2 Identify, discuss, and justify the technical aspects of the chosen project with a comprehensive and systematic approach.

CO3 Reproduce, improve, and refine technical aspects for the projects.

CO4 Work as an individual or in a team in development of technical projects.

CO5 Communicate and report effectively project related activities and findings

CAM	2	2	2	2	3	3	3	1	1

Semester 6

C# AND .NET FRAMEWORK   0-1- 1- 2

Course Objectives: To gain a thorough understanding of the philosophy and architecture of .NET and acquire a working knowledge about the .NET programming model along with database connectivity to develop application programs.

Course Outcomes

CO1	**Learn to use .NET frame work and basic programming concepts in C#**
CO2	**Students will be able to develop programs to solve real world problems using OOPS concepts in C#**

CO3	Understand the Window Programming and event driven programming
CO4	Learn to use ADO.net to store and retrieve data from database

Unit 1

.Net Framework Overview- Architecture-.Net Framework class Libraries-CLR-Metadata-Interoperability-Assemblies-the .net Packaging system-CLR-MSIL , Introduction to Visual Studio.Net-C# Programming Concepts-Predefined Types- Value types and reference type, Classes and Objects, Constructors and methods , Conditional statements, loops, arrays , indexers and properties.

Unit 2

String class: methods and properties of string class, enumerations, boxing and unboxing, OOPS concepts: Encapsulation, data hiding, inheritance, interfaces, polymorphism, operator overloading, overriding Methods, Static Class members, Delegates and events. Exception Handling.

Unit 3

Basics of Windows Programming- Event Driven Programming, Windows Forms, Using common controls-Labels, textboxes, buttons, check boxes, radio button, progress bar, combo box, list box. Components-timer, imagelist, Menus, MDI, Mouse and keyboard event handling.

Unit 4

Introduction to ADO.Net-Object Model- System. Data Namespace- Data Bound controls-Connected Mechanism-Disconnected mechanism-.Net Data Providers.

Textbook/Reference:
1. C# 4.0 the Complete Reference by Herbert Schildt
2. C# by balaguruswamy

CRYPTOGRAPHY AND CYBER SECURITY   4- 0- 0 - 4

Course Objectives: The objective of this course is to teach the concepts of securing computer network protocols, based on the application of cryptography techniques.

COURSE OUTCOME
The course outcomes of this course are:

CO1	*Provide security of the data over the network.*
CO2	*Do research in the emerging areas of cryptography and network security.*
CO3	*Implement various networking protocols.*
CO4	*Protect any network from the threats in the world.*

Syllabus

Unit-1

Introduction to Cyber Security - Types of Attacks(Active/passive), Goals for Security, Security threat and vulnerability, Cyber security models (the CIA triad, the star model). Malicious Software: Viruses, Worms, Information Theft, Key loggers, Phishing, Spyware Payload Stealthing, Backdoors, Rootkits, Distributed Denial of Service Attacks.

Unit-2

Classical encryption techniques substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers - Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion. Data encryption standard (DES), Strength of DES, Differential and Linear cryptanalysis, Block cipher modes of operations.

Unit-3

public key concepts,Principles of public key crypto systems, RSA algorithm, security of RSA. Key Management and distribution. Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution.

Unit-4

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Case study on attacks. Digital Signatures. Elgamal Digital Signature Techniques, Digital signature standards (DSS).

Unit-5

Introduction to SSL. Introduction to SSL and TLS.Introduction to Cyber Crime and security: Cyber Crimes, types of Cyber Crime, hacking, attack vectors, Cross Site Scripting (XSS), XSS

Consequences. Cyber Space and criminal behavior, traditional problems associated with Cyber Crime, Introduction to Incident Response, Digital Forensics.

MAJOR PROJECT   **8 Credits**

</div>

Course Objectives

To allow students to develop their own ideas and get experienced in industrial and research projects. It provides an opportunity in solving a real life problem by applying the knowledge gained through various courses of study and an exposure on different phases of software /system development life cycle.

Course Outcomes

The major outcome of the BCA project must be well-trained students. More specifically students must have acquired the following skills:

CO1 Students will be able to practice acquired knowledge within the chosen area of technology for project development.

CO2 Identify, discuss, and justify the technical aspects of the chosen project with a comprehensive and systematic approach.

CO3 Reproduce, improve, and refine technical aspects for the projects.

CO4 Work as an individual or in a team in development of technical projects.

Elective I and II

ARTIFICIAL INTELLIGENCE   3 0 0 3

Objectives: The main objective of this course is to familiarize the students with how to represent knowledge, including incomplete and uncertain knowledge of the real world; how to reason logically with that knowledge using probabilities; how to use these reasoning models and methods to decide what to do, particularly by constructing plans; and how to reason and make decisions in the presence of uncertainty about the world. It includes some state-of-the-art topics, such as the logical representation of different types of knowledge, reasoning under uncertainty

Course Outcomes

CO1	Students will be able to define the basics of artificial intelligence and the deep challenges it presents to the researcher.
CO2	Students will be able to explain various AI search algorithms (uninformed, informed, heuristic, constraint satisfaction, genetic algorithms)
CO3	Students will be able to define the fundamentals of knowledge representation (logic-based, frame-based, semantic nets), inference mechanisms, game playing and expert systems
CO4	Students will be able to demonstrate working knowledge of reasoning in the presence of incomplete and/or uncertain information

Unit 1
What is Artificial Intelligence? – The AI Problems – The Underlying Assumption – What is an AI technique – Criteria for Success.

Problems, Problem Spaces and Search – Defining Problem as a State Space Search – Production Systems – Problem Characteristics – Production System Characteristics – Issues in the design of Search Programs.

Unit 2
Heuristic Search Techniques - Generate – and – Test – Hill Climbing – Best-First Search – Problem Reduction – Constraint Satisfaction - Means - Ends Analysis. Knowledge Representation issues – Representations and Mapping - Approaches to knowledge Representation – Issues in knowledge Representation – The Frame Problem. Using Predicate Logic – Representing simple facts in Logic – Representing Instance and Isa Relationship – Computable Functions and Predicates – Resolution – Natural Deduction.

Unit 3
Representing Knowledge Using Rules – Procedural versus Declarative knowledge – Logic Programming – Forward versus Backward Reasoning – Matching – Control Knowledge.
Symbolic Reasoning under Uncertainty – Introduction to Non-monotonic Reasoning – Augmenting a Problem Solver – Implementation: Depth - First Search.
Statistical Reasoning – Probability and Baye's Theorem – Bayesian Networks – Fuzzy Logic.

Unit 4
Game Playing - The Minimax Search Procedure – Adding Alpha-Beta Cutoffs.
Understanding – What is Understanding? What makes Understanding hard?
Unit 5
Common Sense – Qualitative Physics – Common sense ontology – Memory Organization - Expert Systems – Representing and Using Domain knowledge – Expert System Shells – knowledge Acquisition - Components of an AI program.

TEXTBOOKS:
1. Artificial Intelligence (Second Edition) – Elaine Rich, Kevin knight (Tata McGraw-Hill)
2. A Guide to Expert Systems – Donald A. Waterman (Addison-Wesley)
REFERENCES:

Client Server Computing

Objectives: The objective of this course is to familiarize with client server computing concepts, To understand the components of client server application, client server system development and the data storage concepts in client server computing.

Course Outcomes:

CO1.To understand the concept of client server computing

CO2.Students will be familiar with the components of client server application.

CO3.Students will be able to understand the concept of client server network.

CO4. Students will be exposed to Client Server Systems Development.

CO5.Students will be able to understand the data Storage concepts in client server computing.

Syllabus:

Unit-1

Client/Server Computing: DBMS concept and architecture, Single system image, Client Server architecture, mainframe-centric client server computing, downsizing and client server computing, preserving mainframe applications investment through porting, client server development tools, advantages of client server computing.

Unit-2

Components of Client/Server application: The client: services, request for services, RPC, windows services, fax, print services, remote boot services, other remote services, Utility Services & Other Services, Dynamic Data Exchange (DDE), Object Linking and Embedding (OLE), Common Object Request Broker Architecture (CORBA). The server: Detailed server functionality, the network operating system, available platforms, the network operating system, available platform, the server operating system.

Unit-3

Client/Server Network: connectivity, communication interface technology, Interposes communication, wide area network technologies, network topologies (Token Ring, Ethernet, FDDI, CDDI) network management, Client-server system development: Software, Client–Server System Hardware: Network Acquisition, PC-level processing unit, Macintosh, notebooks, pen, UNIX workstation, x-terminals, server hardware.

Unit-4

Client Server Systems Development: Services and Support, system administration, Availability, Reliability, Serviceability, Software Distribution, Performance, Network management, Help Disk, Remote Systems Management Security, LAN and Network Management issues. Training, Training advantages of GUI Application, System Administrator training, Database Administrator training, End-user training.

Unit-5

Data Storage: magnetic disk, magnetic tape, CD-ROM, WORM, Optical disk, mirrored disk, fault tolerance, RAID, RAID-Disk network interface cards. Network protection devices, Power

Protection Devices, UPS, Surge protectors. The future of client server Computing Enabling Technologies, The transformational system.

EMBEDDED SYSTEMS

COURSE OBJECTIVES

1. To have enough understanding of the basic structure and design of Embedded systems
2. To understand the fundamentals of Embedded processor, Bus Communication in processors, Input/output interfacing
3. To know about programming concepts of Embedded systems
4. To familiarize the different Phases & Modelling of Embedded system
5. To study the architecture of System-on-Chip and design examples

Program Outcomes

PO1	**Basic Knowledge:** Apply knowledge of Mathematics and Computer Science for complex problem solving.
PO2	**Design and Develop Solutions:** Design and develop solutions for complex problems with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO3	**Modern Tools:** Design and develop applications using modern tools to acquire and manage data, and analyze and interpret it.
PO4	**Ethics:** Apply ethical principles and commit to professional ethics and responsibilities.

| PO5 | **Communication:** Communicate effectively with the domain specific community and with society at large, with effective reports. |
| PO6 | **Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in a multidisciplinary environment. |

COPO Affinity Matrix

CO5	2	3	2	-	-	-	1	2	1
CAM	3	3	2				2	2	1

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS

Introduction to Embedded Systems, Components of Embedded Systems, Structural units in Embedded processor, DMA, Memory management methods- memory mapping, cache replacement concept, Timer and Counting devices, Real Time Clock- CPU architecture of ARM processor- CPU Bus organization

UNIT II EMBEDDED NETWORKING AND ISR

Embedded Networking: Introduction, I/O Device Ports & Buses– Serial Bus communication protocols – Serial Communication Standards and Devices- ISR concept-– multiple interrupts – Serial Bus Protocols- RS232 standard – RS485 –USB – Inter Integrated Circuits (I2C)

UNIT III RTOS BASED EMBEDDED SYSTEM DESIGN

Introduction to basic concepts of RTOS- Task, process & threads, interrupt routines in RTOS, Inter-process Communication – synchronization between processes-semaphores, Mailbox, pipes, priority inversion, priority inheritance

UNIT IV PROGRAMMING CONCEPTS OF EMBEDDED PROGRAMMING

Introduction to Software Development environment-IDE, assembler, compiler, linker, simulator, debugger, In Circuit emulator, Target Hardware Debugging, Features of Embedded C++ and Embedded Java(basic only), Software Implementation, Validation, Testing, system-on-chip

UNIT V EMBEDDED SYSTEM APPLICATION DEVELOPMENT

Objectives, different Phases & Modeling of the Embedded product Development Life Cycle (EDLC), IPC, Message Queue, Sockets- RPCs.

Case study 1- Study on Smart card- Adaptive Cruise control in a Car -Mobile Phone software for key inputs.

Case study 2- Study of other popular RTOS.

Enterprise Resource Planning Management

Objectives: The objective of this course is to describe the concept of ERP and the ERP model; define key terms; explain the transition from MRP to ERP; identify the levels of ERP maturity. Explain how ERP is used to integrate business processes; define and analyse a process; create a process map and improve and/or simplify the process; apply the result to an ERP implementation.

Course Outcomes:

CO1. students will be able to understand the structure of ERP.

CO2. students will be able to understand ERP and related technologies.

CO3. students will be able to understand the different functional modules in ERP.

CO4. students will be able to understand ERP implementation life cycle.

CO5. students will be able to understand the importance of ERP and E commerce.

Syllabus:

Unit-1

ERP Introduction, Benefits, Origin, Evolution and Structure: Conceptual Model of ERP, the Evolution of ERP, the Structure of ERP.

Unit-2

Business Process Reengineering, Data ware Housing, Data Mining, Online Analytic Processing (OLAP), Product Life Cycle Management (PLM), LAP, Supply chain Management.

Unit-3

ERP Marketplace and Marketplace Dynamics: Market Overview, Marketplace Dynamics, the Changing ERP Market. ERP- Functional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain and Customer Relationship Applications.

Unit-4

ERP Implementation Basics, ERP Implementation Life Cycle, Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.

Unit-5

ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into organizational culture. Cloud computing in ERP.

Text Books:

1.Alexis Leon, "ERP Demystified", Tata McGraw Hill

2.Vinod Kumar Garg and Venkitakrishnan N K, "Enterprise Resource Planning Concepts and Practice", PHI.

KNOWLEDGE MANAGEMENT

Objectives: -

To understand knowledge management Systems and the intellectual methods for designing and deploying a Knowledge Management System. Study various tools used in Knowledge Management and its applications.

Course Outcomes

CO1- To get basic idea on knowledge management Systems.

CO2- Be familiar with tools for Knowledge management.

CO3- Be exposed to knowledge management Applications.

CO4- Be familiar with some case studies

Syllabus

Introduction: An Introduction to Knowledge Management – The foundations of knowledge management- decision support systems. Business Intelligence, Attributes of Knowledge, Expression of Knowledge- Business benefits of knowledge-Evolution of Knowledge Management – Ethics for Knowledge Management.

Tools for knowledge management-Knowledge Initiatives, KM Process-Life cycle, Knowledge Networking, Principles behind KM success, Thematic Analysis - Knowledge Transformation and Dynamics.

Knowledge Management System and Development, Generic model - Life Cycle- Application Cycle- Challenges in Developing KMS- KM System Architecture, Knowledge Construction Architecture, Implementation of KMS, The learning concept and Knowledge Management System -Establish a knowledge strategy framework, Validation of Knowledge, Validation of knowledge - Knowledge Creation, Acquisition of Knowledge-Knowledge Acquisition Techniques.

Application phase and Organisation Learning, Knowledge Transfer, Knowledge sharing: Knowledge Transferring sharing and tools, Codification of Knowledge, build a knowledge Maps, Designing Knowledge Transfer and Sharing strategy, Network structures for Knowledge Transfer, Knowledge Asset, Organization and Knowledge Management – Building the Learning Organization. Knowledge Markets- Technology Foundations – The Internet and Internet Services – Web Components and Communications.

Knowledge Management: Ganesh Natarajan, President & CEO Aptech

MICRO PROCESSOR SYSTEMS

The objective of the course is to make students clear about the architecture and instruction set of typical 8-bit microprocessor. It also deals with Assembly Language Programming using a macro-assembler. Input-output techniques and important programmable support chips used in microprocessor-based systems are discussed in detail.

UNIT I

Introduction of Microcomputer System: CPU, I/O devices, clock, memory, bussed architecture, Tristate logic, address bus, data bus and control bus. Semiconductor Memories: Development of semiconductor memory, internal structure and decoding, memory read and write timing diagrams, MROM, ROM, EPROM, EEPROM, DRAM

UNIT 2

Architecture of 8-bit Microprocessor: Intel 8085A microprocessor,Pin description and internal architecture. Operation and Control of Microprocessor: Timing and control unit, op-code fetch

machine cycle, memory read/write machine cycles, I/O read/write machine cycles, interrupt acknowledge machine cycle, state transition diagram.

UNIT 3

Instruction Set: Addressing modes; Data transfer, arithmetic, logical, branch, stack and machine control groups of instruction set, macro RTLand micro RTL flow chart of few typical instructions; Unspecified flags and instructions.

Assembly Language Programming: Assembler directives, simple examples;Subroutines, parameter

UNIT 4

Interrupts: Interrupt structure of 8085A microprocessor, processing of vectored and nonvectored interrupts, latency time and response time; Handling multiple interrupts

UNIT 5

Programmable Peripheral Interface: Intel 8255, pin configuration, internal structure of a port bit, modes of operation, bit SET/RESET feature, programming; ADC and DAC chips and their interfacing.

Programmable Interval Timer: Intel 8253, pin configuration, internal block diagram of counter and modes of operation, counter read methods, programming, READ-BACK command of Intel 8254.

MULTIMEDIA AND GRAPHICS   3 0 0 3

Course Objectives

- To build an understanding of the fundamental concepts of Computer Graphics & Multimedia
- To familiarize with the working principles of various display technologies.
- To prepare for understanding advanced courses in Computer Graphics.
- Adoption of factual knowledge and development of skills needed for independent development of multimedia systems and applications using available hardware and software tools.

Course Outcome

After successfully completed course, students will be able to:

CO1-Describe the types of media and define multimedia system.

CO2-Describe the process of digitizing (quantization) of different analog signals (text, graphics,   sound and video).

CO3-Use and apply tools for image processing, video, sound and animation.

CO4-Apply methodology to develop a multimedia system.

CO5-Apply acquired knowledge in the field of multimedia in practice and independently
       continue to expand knowledge in this field.

Unit 1

Introduction: Graphics Systems – Raster Scan & Random Scan systems. Output Primitives,What is Multimedia? – Introduction to making Multimedia - Media Skills – Macintosh and Windows Platforms – Basic software tools.

Unit 2

Making instant Multimedia – Multimedia Authoring tools.

Unit 3

Multimedia Building Blocks: Text – Sound – Images.

Unit 4

Multimedia Building Blocks: Animation: types, techniques, key frame animation, utility, morphing. Virtual Reality concepts.– Video.

Unit 5

Multimedia and the Internet: The Internet and how it works – Tools for World Wide Web – Designing for the World Wide Web.

18CSA340 SOCIAL AND PROFESSIONAL ISSUES IN COMPUTING 3 0 0 3

Objectives:
This course is designed to explore the nature and principles of ethics-- including personal, professional, and corporate ethics - in a computing context. Address the interplay between ethics on the one hand; and law, society, politics, economy, justice, responsibility, honesty on the other. Explore specific ethical issues raised by the ubiquity of computer and information technology in today's society.

Course outcomes

CO1	Able to identifiy social and ethical issues that arise in the development and application of computing technology in modern society
CO2	Understand the responsibilities of computer professionals as defined by the Software Engineering Code of Ethics and Professional Practice
CO3	Understand risks and security operations in an organization
CO4	Able to formulate viewpoints concerning the current legal and ethical status of intellectual property rights – specifically trade secrets, trademarks, copyrights, patents, and licensing – as they relate to computer software
CO5	Able to handle some legal issues related to computer crime and hacking

Unit 1
Social Context: Introduction to the social implications of computing, Social implications of networked communication, Growth of, Control of, and access to the Internet, Gender – Related issues, Cultural issues, International Issues, Accessibility Issues (e.g. underrepresentation of minorities, Women and disabled in the computing profession), Public policy issues (e.g. electronic voting).

Unit 2
Analytical Tools: Making and evaluating ethical arguments, Identifying and evaluating ethical choices, Understanding the social context of design, Identifying assumptions and values. Professional Ethics: Community values and the laws by which we live, The nature of professionalism (Including care, attention and discipline, fiduciary responsibility, and mentoring).

Keeping up-to-date as a professional (in terms of knowledge, tools, skills, legal and professional framework as well as the ability to self-assess and computer fluency), Various forms of professional credentialing and the advantages and disadvantages, The role of the professional in public policy, Maintaining awareness of consequences, Ethical dissent and whistle-blowing. Codes of ethics, conduct, and practice(IEEE, ACM, SE, AITP, and so forth),

Dealing with harassment and discrimination, "Acceptable use" policies for computing in the work place. Healthy Computing environment (ergonomics)

Unit 3
Risks: Historical examples of software risks (such as the Therac-25 case), Implications of software complexity, Risk assessment and Risk Management; Risk removal, risk reduction and risk control.
Security Operations: Physical security, Physical access controls, Personnel access controls, Operational security, Security polices for systems/networks, Recovery and Response, Dealing with problems (both technical and human)

Unit 4
Intellectual Property: Foundations of Intellectual Property, Copyrights, patents, and trade secrets, Software Piracy, Software Patents, Transactional issues concerning Intellectual Property. Privacy and Civil Liberties: Ethical and legal basis for privacy protection, Ethical and legal framework for freedom of information, Privacy implications of database systems (e.g. Data gathering, storage and sharing, massive data collecting, computer surveillance systems) Technological strategies for privacy protection, Freedom of expression in cyberspace, International and intercultural implications.

Unit 5
Computer Crime: History and examples of computer crime, "Cracking" ("Hacking") and its effects, Viruses, Worms, and Trojan Horses, Identity Theft, Crime Prevention strategies.

TEXTBOOK:

Ethics for Information Age, 3rd Edition, Michael J. Quinn, Pearson/Addison Wesley, 2009

Soft Computing

Objectives: The objective of this course is to familiarize with soft computing concepts, introduce and use the idea of Neural networks, fuzzy logic and use of heuristics based on human experience, introduce and use the concepts of Genetic algorithm and its applications to soft computing using some applications.
Course Outcomes:

CO1.To understand the concept of soft computing and its applications

CO2.To be familiar with the design of neural network architectures

CO3.Students will be able to understand the concept of fuzzy systems.

CO4. Students will be exposed to neuro-fuzzy hybrid systems and its applications

CO5.Students will be able to understand the genetic algorithm concepts.

Syllabus:

Unit-1

Introduction to Soft Computing-Concept of computing systems-"Soft" computing versus "Hard" computing-Characteristics of Soft computing-Some applications of soft computing techniques.

Unit-2

What is Neural Network, Learning rules and various activation functions, Single layer Perceptron, Back Propagation networks, Architecture of Back propagation (BP)Networks, Backpropagation Learning, to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications.

Unit-3

Fuzzy Set theory, Fuzzy versus Crisp set, Fuzzy Relation, Fuzzification, Minmax Composition, Defuzzification Method, Fuzzy Logic, Fuzzy Rule based systems, Predicate logic, Fuzzy Decision Making, Fuzzy Control Systems, Fuzzy Classification.

Unit-4

Hybrid Soft Computing Techniques and Applications-Neuro-fuzzy hybrid systems – genetic neuro hybrid systems – genetic fuzzy hybrid and fuzzy genetic hybrid systems – simplified fuzzy ARTMAP – Applications: A fusion approach of multispectral images with SAR, optimization of traveling salesman problem using genetic algorithm approach, soft computing-based hybrid fuzzy controllers.

Unit-5

Genetic Algorithm: -History of Genetic Algorithms (GA), Working Principle, Various Encoding methods, Fitness function, GA Operators- Reproduction, Crossover, Mutation, Convergence of GA, Bit wise operation in GA, Multi-level Optimization

Text Books:

1. Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis & Applications, S.Rajasekaran, G. A. Vijayalakshami, PHI

2. S.N.Sivanandam and S.N.Deepa, "Principles of Soft Computing", Wiley India Pvt Ltd, 2011.

18CSA342   SYSTEMS AND NETWORK ADMINISTRATION 3 0 0 3

COURSE OBJECTIVE: The main aim of this course is to provide basic ideas to manage and administer computer systems as well as networks. Students are trained with practical sessions.

COURSE OUTCOMES

CO1: Understand the role of a System/Network administrator

CO2: Understand the basic software commands for managing and administering the systems/networks.

CO3: Develop skills in doing subnetting, routing, and VPN installation.

CO4: Develop the skill to test the security vulnerabilities and their countermeasures.

CAM	2	1	2	2	2	2			

Unit 1

Understanding System Administration – Network Operating System - Network File System – Admin User - Administration Tools – Commands - Configuration Files – Log Files - Backup and Restore Files.

Unit 2

User Management - Issues - Registration – Account Policy – Login environment – Setting up and Supporting Users – Disk Quotas.

Unit 3

Network Administration – Topologies – Network Devices - Understanding TCP/IP – Administering TCP/IP - Network Configuration – Static and Dynamic -Routing, Switching, VPN and other security protocols-Firewall administration

Unit 4

Introduction to File Server – Setting Up a File Server – Network File Systems - SAMBA – Web Server.

Unit 5

Understanding Directory Services – Active Directory/LDAP – Network Security – Importance of Port Number – Tracking Services – Monitoring your System – Network Security Tools Implement and monitor security measures for the protection of computer systems, networks, and information.

6. Linux Cookbook: Essential Skills for Linux Users and System & Network Administrators 2nd Edition by Carla Schroder

| xxxx | **COMPUTER GRAPHICS** | 3 0 0 3 |

Objectives: The primary objective of this course is to give the basic principles of 2D and 3D computer graphics, to study the elementary mathematical techniques that allow us to position objects in three dimensional spaces and techniques necessary to produce basic 2D/3D dimensional illustrations.

Course Outcomes

CO1	Students will be able to explain various Graphics applications, different video display devices, and describe Raster-Scan Systems and Random-Scan Systems.
CO2	Students will be able to construct lines and circles by applying Bresenham's Line Algorithm and Midpoint Circle Algorithm and apply appropriate filling algorithms to fill objects.
CO3	Students will be able to describe two-dimensional and three-dimensional transformations.
CO4	Students will be able to describe line clipping and projections.
CO5	Students will be able to write basic graphics programming using OpenGL.

CO – PO Mappings

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

CO5	3	3	3	2	2	1	-	1	1	1
CAM	3	2	1	2	2	1	-	1	2	1

Syllabus

Unit 1
Applications of Graphics, Display devices, Random and Raster Graphics systems, Output Primitives: Bresenham's Line Algorithm, Midpoint Circle Algorithm; Filled Area Primitives: Boundary-Fill Algorithm, Flood-Fill Algorithm; Bitmap Character Generation.

Unit 2
Two-Dimensional Geometric Transformations: Translation, Rotation, Scaling, Homogeneous coordinates. Reflection, Shear. Three-Dimensional Geometric Transformations: Translation, Rotation, Scaling, Reflection, Shear.

Unit 3
Two-Dimensional Viewing: Window-to-viewport transformation, Clipping - Cohen Sutherland Line Clipping algorithm.

Unit 4
Three-Dimensional Viewing: Projections, Parallel Projections, Perspective Projections, View Volumes.

Unit 5
Graphics Programming: OpenGL Introduction: Command Syntax, Drawing and filling images, patterns, filling regular and irregular shapes, Outputting Text, Justifying Text, Animation. Drawing with mouse, building mouse cursors, freehand drawing using mouse, menus using mouse.

TEXTBOOKS:
1. Computer Graphics, C Version, D. Hearn, M.P. Baker, 2nd Edition, Pearson Education
2. OpenGL Programming Guide, M. Woo, J. Neider, T. Davis, D. Shreiner, 3rd edition, Pearson Education

Professional Electives

IoT architectures and Programming 3-0-1-4

Course Outcomes

1. Train students to be equipped with a solid theoretical foundation
2. Systematic professional knowledge and strong practical skills in the IoT Platform and System Design.
3. Understanding the vision of IoT from a global perspective, understand its applications
4. Determine its market perspective, using gateways, devices and data management
5. Building a state of art architecture in IoT and its applications in commercial building automation and real-world design constraints.

CO – PO Affinity Map

Course Content:

Module I: IoT Networking Core Technologies involved in IoT development, Internet web and Networking technologies, Infrastructure, Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards, Wireless networking equipment and configurations, accessing hardware and device file interactions.

Module II: M2M to IoT Role of M2M in IoT, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. Building architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations

Module III: IoT Architecture -State of the Art IoT reference Model and Architecture-Functional View, Information View, Deployment and Operational View, Other Relevant architectural views, Middleware Introduction-FiWare etc., Remote monitoring and sensing, remote controlling and performance analysis, layering concepts, communication pattern, 6LoWPAN, Sensors and sensor Node and interfacing using any Embedded target boards (Raspberry Pi / Intel Galileo/ARM Cortex/ Arduino)

Module IV: IoT Application Development Application protocols: MQTT, REST/HTTP, CoAP, MySQL, Back-end Application Designing Apache for handling HTTP Requests, MongoDB Object type Database, HTML, CSS & jQuery for UI Designing, JSON lib for data processing, Security & Privacy during development

Module V: IoT Security and case studies Security, Privacy and Trust in IoT-Data-Platforms for Smart Cities, First Steps towards a Secure Platform, Smarty Approach. Data Aggregation for the IoT in Smart Cities

Advanced Software Engineering and Design Patterns 3-0-1-4

Objectives: Advanced Software Engineering presents a broad perspective on software systems engineering, concentrating on widely used techniques for developing large-scale software systems covering a wide spectrum of software processes from initial requirements elicitation through design and development to system evolution. The course also covers a wide range of software development abilities and skills from analyzing a problem to implement a solution, by discussing the design patterns in Smalltalk MVC architecture, Express representation invariants, understand their impact on efficiency and ease of implementation, and implement them as runtime assertions by differentiating between structural patterns and behavioral patterns involved in a software development process.

COURSE OUTCOMES
CO1: Illustrating the idea of the software myths, basics of software engineering, SRS and its phases with different Process Models etc.
CO2: Describe the design and working of ERD, DFD, Design Methods and architectural views.
CO3: An overall idea about Testing strategies, different methods, design transformation to understand the structure of application development. Design a module structure to solve a problem, and evaluate alternatives in software applications.
CO4: Analyze and Design a model by exploiting the well-known design patterns (such as Iterator, Observer, Factory and Visitor)

CO5: Ability to understand and apply common design patterns to incremental/iterative development.
CO6: Ability to identify appropriate patterns for designing solution to the given problem by applying the software development concepts for implementing a solution.
CO-PO Mapping

Preamble:
Students should be well-versed with Object Oriented Programming concepts, and basic data structures such as arrays, hash tables, trees and lists and with the fundamentals of software process models, various procedures of designing and testing techniques considered for developing a software application.

Prerequisite Courses:

Sl. No	Course Code	Course Name
1		Basics of Software Engineering
2		Object Oriented Programming concepts, and basic data structures such as arrays, hash tables, trees and lists.

Syllabus:

Introductions to Software Engineering: Software Myths and Types, Process and Products, Software Characteristics, SDLC process, Software requirements specification, approaches and paradigms. Prototyping, RAD, SCRUM, Incremental and Agile process models.

Design process consideration: Design Concepts, Design Architecture, Description and Principles, UML Modeling: Use case and Class Diagrams, State Transition Diagrams and Interaction Diagrams. Analysis to Design Modeling: Transformations. Testing fundamentals: Testing Principles, Processes and Methods used for evaluating a software.

Introductions to Design Pattern, Catalog of Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern.

A Case Study: Designing a Document Editor: Design Problems, Document Structure, Formatting, Embellishing the User Interface, Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems. Creational Patterns: Abstract Factory, Builder, Factory Method and Prototype Patterns.

Categories of Patterns: Structural Patterns: Adapter, Bridge, Composite and Decorator. Behavioral Patterns: Observer, Mediator, Interpreter and Iterator. Differences between Structural and Behavioral Patterns. Discussion of real-time examples.

TEXTBOOK:
1. Roger S Pressman, "Software Engineering", Tata McGraw-Hill Publishing Company Pvt. Ltd., Sixth Edition
2. Design Patterns by Erich Gamma, Pearson Education.

REFERENCES:
1. Shooman, "Software Engineering", Tata McGraw-Hill Publishing Company Pvt. Ltd., 1987
2. Design Patterns Explained by Alan Shalloway, Pearson Education.
3. Pattern Oriented Software Architecture, F. Buschmann & Others, John Wiley & Sons.

ADVANCED DATA MINING AND APPLICATIONS 3-0-1-4

Objectives: Students will be able to develop an understanding of the strengths and limitations of popular advanced data mining techniques and to be able to identify promising business applications of data mining in various sectors. Students will be able to actively manage and participate in advanced data mining projects executed by consultants or specialists in data mining. A useful take away from the course will be the ability to perform powerful data analysis in modern tools.

Course Outcomes

CO1 To remember the difference between database and data mining and it applications, classification and issues.

CO2 Understand the various data pre-processing methods like cleaning, integration, transformation, reduction.

CO3 Apply the frequent pattern mining algorithms to find the frequent pattern and understand the various patterns and its rules.

CO4 understand the various classification and prediction algorithms and evaluate the performance of classifiers.

CO5 To analyse the nature of data, based on the nature apply various clustering algorithm and detect the outliers and process the outlier using various methods.

Syllabus

Introduction: Why data mining, what is data mining, what kinds of data can be mined, what kinds of patterns can be mined, what technologies are used, what kinds of applications are targeted, Major issues in data mining.

Data Pre-processing: an overview, Data Cleaning–missing values, noisy data, data cleaning as a process, Data Integration–entity identification problem, redundancy and correlation analysis, tuple duplication, data value conflict detection and resolution, Data Reduction–PCA, wavelet transformation, attribute subset selection, histogram, sampling, Data Transformation and Discretization.

Mining Frequent Patterns: Basic Concept –Apriori algorithm-Pattern-growth approach for mining Frequent Item Set Mining Methods – Mining Association Rules – Association to Correlation Analysis-pattern mining-road map, pattern mining in multilevel, multidimensional space, constraint-based frequent pattern mining-mining, high-dimensional and colossal patterns-pattern exploration and applications.

Classification and Prediction: Basic Concept - Decision Tree Induction - Bayesian Classification – k-Nearest-Neighbour ,Classification by back propagation-- Linear SVM - Regression – Linear, Logistic – Model evaluation and selection-metric for evaluating classifier performance-holdout method and random subsampling, cross validation-bootstrap, ROC, Technique for improve classification accuracy–Introduction to Ensemble methods-Bagging-boosting and AdaBoost, Random forest-Multiclass classification-Semi-supervised classification-Active learning-Transfer learning.

Clustering: What is cluster analysis, requirements for cluster analysis, Overview of basic clustering methods-Partitioning Methods, k-Means, k-Medoids. Hierarchical Methods-Agglomerative and Divisive hierarchical clustering, Single, Average and Complete linkage, BIRCH, CHAMELEON. Density-Based Methods-DBSCAN-OPTICS, DENCLUE, Grid-Based Methods-STING,CLIQUE , Evaluation in Clustering, Advanced clustering-Probabilistic Model-Based Cluster-EM algorithm, Outlier Detection- Outlier and Outlier analysis-what are outliers, type of outliers, Outlier detection methods-, Statistical approaches-parametric methods, nonparametric methods, Proximity-based approaches-a grid-based method, density-based outlier detection, clustering-based approach, classification based approaches, clustering based approaches.

LAB-Tools :Implementation of Data mining algorithms using Latest Open Source Data mining Tool-Python, Jupyter notebook, Spider, R-programming.

CO – PO Mappings

CLOUD COMPUTING 3-0-1-4

Objectives

To Familiarize the Cloud computing environment, services and delivery models and also analyze the cloud deployment models, QoS parameters, Accounting and Security.

Course Outcomes

CO1	Familiarize the various Computing platforms and features
CO2	Analyze the features of virtualization
CO3	Understand the architecture, cloud services and cloud platforms
CO4	Analyze Cloud delivery models and deployment models
CO5	Understand the concepts of cloud Accounting and Security
CO6	Develop a Cloud platform, VM containers and analyze services, and QoS performance

Syllabus

Cloud Computing Overview: Cloud and Grid and Web2.0 and Other Computing- Cloud Computing Environments- Platforms. Parallel and Distributed Computing- Virtualization: Characteristics-Taxonomy- Pros and Cons – Xen- VMware- Hyper V. Cloud Computing Architecture-Service Models Deployment Models-Infrastructure as a Service Resource Virtualization-Server-Storage-Network-Platform as a Service-Cloud Platform and Management-Software as a Service-Case Study on Open Nebula. Service Management in Cloud Computing Service Level Agreement-Billing and Accounting-Managing Data. Cloud Security: Infrastructure, Data and Storage Security.

Lab

Cloud Computing:- Familiarize various public and private cloud platforms, Create configure VMs, Working with Containers and docker, to implement IAAS and PAAS model services. Application development and deployment in cloud with a scenario application, Containerizing and orchestrating apps, Different storage options, Monitoring and load-balancing, build a private Cloud using

SYSTEM SECURITY 3-0-1-4

Course Outcomes

CO1	Understand various attacks on the system and the need for security
CO2	Understand various malicious and non malicious program errors and learn to develop secure programs
CO3	Learn various protection mechanism provided by operating system and to manage it
CO4	Review the security services provided by the database systems.
CO5	Gives the students an idea about the threats in computer networks, ethical issues, privacy and copyright laws

Architecture and Deployment of Secure and Scalable WAN   3-0-1-4

COURSE OUTCOME

CO1	Understand what are the design considerations for the enterprise network.
CO2	Learn to configure and troubleshoot WLAN
CO3	Understand the operation and configuration of WAN technologies
CO4	Learn datalink protocol like PPP, HDLC and NAT concepts

CO5	Understand VPNs and IPsec; Students will be able to troubleshoot and monitor the network using various tools

Syllabus

Unit 1

Introduction to Scaling Networks, implementing a Network Design, LAN Redundancy, Spanning Tree Concepts and protocols.

Unit 2

Link Aggregation Concepts and Configuration, Wireless LAN Concepts, operations and Security, Wireless LAN Configuration, Troubleshoot Single-Area OSPF, Multiarea OSPF

Unit 3

Operation and configuration. Hierarchical Network Design, WAN Technologies, Spanning Tree Configuration, First-Hop Redundancy Protocols, Point-to-Point Connections.

Unit 4

PPP Operation and Configuration, HDLC protocol, Troubleshoot WAN Connectivity, Frame Relay concepts and Configurations, NAT Operation & Configuration, Troubleshooting NAT

Unit 5

Tele working, Broadband Solutions, Configuring xDSL Connectivity, Securing Site-to-Site Connectivity, VPNs, Site-to-Site GRE Tunnels, IPsec, Monitoring the Network – Syslog, SNMP, Netflow, Network Troubleshooting with a Systematic Approach.

TEXTBOOKS

Introduction to Business Analytics and Visualization   3-0-1-4

Objectives:

- To promote the ability to critically analyze and solve data-oriented real-world decision problems.
- To utilize the theories of statistics and probabilities in business analytics.
- To gain familiarity with an array of modeling techniques used to solve data-oriented decision problems.
- To learn best practices in visualization.
- To understand time series modeling of historical data.

Course Outcomes

CO1: Apply best practices of data visualization in different stages of the data mining process.

CO2: Analyze and explore data to get useful insights for business.

CO3: Ability to choose an appropriate data analysis methodology suitable for a given business problem.

CO4: Achieve familiarity with using data analysis tools like excel.

Syllabus

Unit 1
Introduction to Business Analytics , Descriptive Statistics - Types of Data and its Measures, Data cleansing. Data Visualization-Design Techniques, Tables, Charts, Advanced data Visualization, Dashboards, Case Studies.

Unit 2
Inferential Analysis - Statistical Inference, Descriptive Data mining - Clustering and Association Rules. Performance Evaluation, Overview of key Classification and prediction techniques, Case studies.

Unit 3
Introduction to Forecasting,Time Series – Level, Trend, and Seasonality, Smoothing Techniques – Moving Average and Exponential Smoothing, Determining the best forecasting model to use. Case Study.

Mathematics Core

MATHEMATICAL FOUNDATION FOR COMPUTER SCIENCE

Objectives: The primary objective of this course is to provide mathematical background and adequate experience on various topics of basic mathematics like Set Theory,Matrix,Differential calculus etc.. This course will extend student's Logical ability.

Course Outcomes

CO1	Study and solve problems related to connectives ,predicates and quantifiers under different situations.
CO2	Develop basic knowledge of matrices and to solve equations using Cramer's rule.
CO3	Know the concept of eigen values .
CO4	To develop the knowledge about derivatives and know various applications of differentiation.
CO5	Understand the basic concepts of Mathematical reasoning, set and functions

COPO Affinity Matrix

CO2	3	2	-	-	-	-	1	-	-

CO3	3	3	-	-	-	-	2	2	-
CO4	3	3	-	-	-	-	2	2	1
CO5	3	2	-	-	-	-	1	2	1
CAM	3	3	-				2	2	1

Unit 1

Basic concepts of set theory - Mathematical logic-introduction-statements-connectives-negation, conjunction, disjunction- statement formulas and truth tables- conditional and bi-conditional statements- tautology-contradiction-equivalence of formulas-duality law-Predicates and Quantifiers, Arguments.

Unit 2

Operations on sets - power set- venn diagram Cartesian product-relations - functions- types of functions -composition of functions.

Unit 3

Matrix algebra-Introduction-Types of matrices-matrix operations-transpose of a matrix -determinant of matrix - inverse of a matrix- Cramer's rule

Unit 4

Matrix: finding rank of a matrix - normal form-echelon form-Cayley Hamilton theorem-Eigen values

Unit 5

Differential calculus - Functions and limits - Simple Differentiation of Algebraic Functions — Evaluation of First and Second Order Derivatives – Maxima and Minima

DISCRETE MATHEMATICS

Objectives

To give an insight to develop logical thinking and its application to computer science by learning Boolean algebra, number theory, counting techniques and graph theory.

Course Outcomes

CO1	To understand the basic concepts of Mathematical reasoning, set and functions.
CO2	To understand various counting techniques and principle of inclusion and exclusions.
CO3	Understand the concepts of various types of relations, partial ordering and equivalence relations.
CO4	Apply the concepts of generating functions to solve the recurrence relations.
CO5	Familiarise the fundamental concepts of graph theory and shortest path algorithm.

COPO Affinity Matrix

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PS01	PSO2	PSO3
CO1	3	2	-	-	-	-	1	2	1

CO4	3	3	-	-	-	-	1	1	-
CO5	1	1	1	-	-	-	1	2	3
CAM	1	3	2				1	1	2

Unit 1

Binary operations, group, semi group,monoid, abelian group, subgroup(simple theorems without proof) Boolean algebra-definition-principle of duality-theorems.

Unit 2

Basic Counting Principles, Generating Functions, Euler's phi-function and its Application to Cryptography.

Unit 3

Relations and their properties - relation matrix, graph of a relation - types of relations -equivalence relation - n-ary relations

Unit 4

Advanced Counting Techniques: Recurrence Relations, Solving Linear Recurrence relations, Divide and Conquer Algorithms and Recurrence relations, Generating Functions, Inclusion Exclusionprinciples and their Applications.

Unit 5

Introduction to Graph Theory: Graphs, Bipartite Graphs, Eulerian and Hamiltonian Graphs, Graph Connectivity.

TEXTBOOK:

Kenneth H. Rosen, Discrete Mathematics and its Applications, McGraw Hill.

STATISTICAL AND NUMERICAL METHODS

Objectives: The main objective of this course is to understand and implement various concepts of numerical analysis and statistics to solve real life problems.

Course Outcomes

CO1	Study the relationship of a dependent variable on an independent variable.
CO2	Understand the various types of probability distributions and its applications
CO3	To understand the meaning and process of differentiation
CO4	Provide numerical answers to complex problems of scientific and engineering nature.
CO5	Develop an idea of numbers, its divisibility and properties

COPO Affinity Matrix

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PS01	PSO2	PSO3

CO4	2	2	-	-	-	1	1	1	-
CO5	2	2	2	-	-	-	2	2	1
CAM	2	2	2			1	2	1	1

Unit 1

Statistics-Introduction -Measures of average-AM-Median-Mode, Measures of dispersion and its coefficients – Range – QD – SD-MD

Unit 2

Correlation- Karl Pearson's and Spearman's rank correlation, Regression- regression equations, regression coefficients

Unit 3

Permutations – combinations – Probability-addition theorem, multiplication theorem, independent events,conditional probability,Baye's theorem,Probability distribution-Binomial,Poisson, Normal.

Unit 4

Interpolation- Newton's forward &backward method- Lagrange's Method,Curve fitting-fitting a straight line

Unit 5

Solutions of Numerical, Algebraic and transcendental methods- bisection method, Newton Raphson method,Simultaneous linear equations -Gauss elimination

Foundations of Applied Mathematics - Part I

Course Description:

Foundations of Applied Mathematics –Part 1 is the first of the two-part course on Foundations of Applied Mathematics. The two courses offer basic mathematical foundations necessary to become computer science professionals. They also form the pre-requisite courses for various other mathematical courses and electives offered throughout the program.

Unlike conventional methods, these courses are designed to teach mathematics through programming. The curriculum with the combination of pedagogy and online learning tools will help students to engage with and express mathematical concepts easily, through programming. More emphasis is laid on mathematical understandings and interpretations, while less emphasis is laid on manipulations and memorizations. At the same time, mathematical concepts taught throughout the course will be motivated and connected to various real-life applications. Thus, the students will be able to learn mathematics in a new, meaningful, and generalizable ways. We do not learn abstract mathematics in this course nor focus on mathematical rigor through theorems and proofs.

Course Outcomes (CO):

CO	Statement
CO1	Learn mathematical principles and techniques to model and solve real life problems
CO2	Familiarize with various computational tools to learn and apply mathematics
CO3	Build foundations to learn advanced mathematical concepts necessary to become computational engineer/scientist, machine learning or data science practitioner
CO4	Be able to communicate mathematical ideas orally and in writing with precision, clarity and organization

Syllabus

Unit-I: Mathematical Modelling
Roadmap of the mathematics curriculum - Problem solving -Real life applications-Mathematical modeling.

Unit-II: Description of data,Learning Computational Tools
Data observation, recording, representation and visualization (single variable and multi variable) - Introduction to Excel, Python and Jupyter - Simple data structures - Learning mathematical libraries (Matplotlib, Sympy, Numpy).

Unit-III: Algebra and Trignometry
Order of operations - Variables and expressions - Bases and exponents - Evaluation of algebraic expressions - Linear equations and inequalities - System of linear equations - Trigonometry - Degrees and radians.

Unit-IV: Functions
Definition of functions - Independent and dependent variables - Function visualization-Algebraic functions- Polynomial functions- Exponential functions- Logarithmic functions-

Trigonometric functions - Inverse functions - Arithmetic operation on functions - Composition of functions - Functional transformations.

Unit-V: Probablity & Statistics
Description of data with statistics - Measures of central tendency - Basics of probability - Random numbers - Probability density functions - Normal distributions - Central limit theorem

Foundations of Applied Mathematics - Part II

Course Description:

Foundations of Applied Mathematics – Part II is the second part of the two-part course on Foundations of Applied Mathematics following Part I. The two courses offer basic mathematical foundations necessary to become computer science professionals. They also form the pre-requisite courses for various other mathematical courses and electives offered throughout the program.

Unlike conventional methods, these courses are designed to teach mathematics through programming. The curriculum with the combination of pedagogy and online learning tools will help students to engage with and express mathematical concepts easily, through programming. More emphasis is laid on mathematical understandings and interpretations, while less emphasis is laid on manipulations and memorizations. At the same time, mathematical concepts taught throughout the course will be motivated and connected to various real-life applications. Thus, the students will be able to learn mathematics in a new, meaningful, and generalizable ways.

We do not learn abstract mathematics in this course nor focus on mathematical rigor through theorems and proofs.

Course Outcomes:

CO1	Learn mathematical principles and techniques to model and solve real life problems.
CO2	Familiarize with various computational tools to learn and apply mathematics.
CO3	Build foundations to learn advanced mathematical concepts necessary to become computational engineer/scientist, machine learning or data science practitioner.
CO4	Be able to communicate mathematical ideas orally and in writing with precision, clarity and organization

Syllabus:

Unit-I: Introduction to Calculus, Limits
History of calculus – Overview of calculus – Single variable and multivariable calculus - Calculus and mathematics modeling – Limits of functions – Continuity of functions.

Unit-II: Differential Calculus
Differentiating a function – Slopes and derivatives - Algebra of derivatives - The chain rule of differentiation - Extreme values of functions – The mean value theorem - First and second derivative tests.

Unit-III: Integral Calculus
Area under the curve – Indefinite integral - Integration by substitution – Definite integral – Fundamental theorem of calculus – Integration by parts – Numerical Integration - Applications of the definite integral in geometry, science and engineering

Unit-IV: Differential equations
Introduction to differential equations – Mathematical modeling with differential equations – Separation of variables – First Order Differential Equations – Second Order Constant Coefficient Linear Equations – Fourier transforms - Laplace transforms – First Order Systems – Convolution.

Unit-V: Elementary Linear Algebra
Systems of linear equations – Gauss elimination – Matrix operations, including inverses – Least square problem – Determinants and their properties – Eigenvalues and eigenvectors – Matrix decompositions
